DATA HUB

A single, secure platform connecting you directly to your assets.

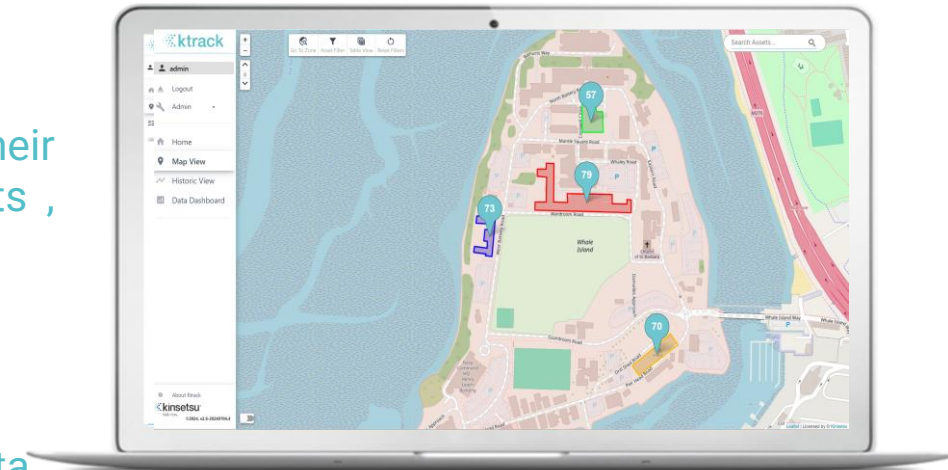

By understanding location, status, and environment, our platform will save time, money and reduce risk. ktrack® provides real-time data for TAKT time, through location awareness and traceability of assets, whether inventory, equipment, tooling, or people, improving resource and energy utilisation.

The ktrack® platform enables SMEs to adopt new digital technologies at their own pace, enhancing productivity with automated data insights into assets, automatically enhancing flow visibility, reducing reliance on manual tasks.

By using environment and energy sensors to gather baseline data, manufacturers will capture data to measure and improve. Automated energy and carbon sensor data will help with **Digital Product Passport** readiness.

Instant and actionable data to inform decision making.

ktrack® ensures teams have the assets needed to deliver against assigned tasks or services.

- Digital mapping of your building with geo-location provides instant visual representation of critical asset locations
- Customisable filtering, seek and find, workflow and zoning provides a powerful tool, tailored to each location and flow.
- A cloud based secure IoT platform with API to existing systems.

Data driven productivity through automated insights of flows and assets.

- Plug & play technology that easily integrates with your environment
- In-building, regional and global location and environment visibility
- Full audit traceability of asset movement and environmental conditions
- Customisable reports for informed decision-making

Notifications to alert to risks and/or asset constraint

- Connecting and tracking to inform TAKT and cycle times
- Business logic for alerting and notifications, including stock management
- Workflow automated requests to improve efficiency

Lighthouse Innovation Bundle

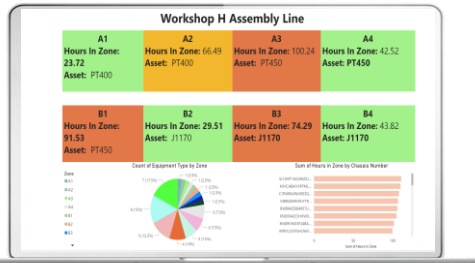

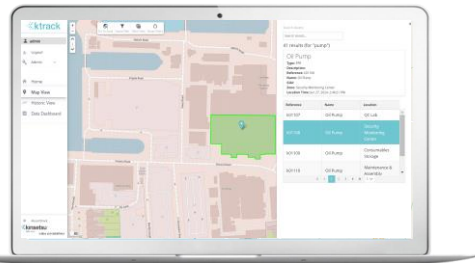

ktrack®

ktrack® Asset Tracking License

Dynamic Visualisation

Realtime Analytics

Expert Support

Environment & Consumption
Track 2 zones Co2, temperature, humidity and light.

Site electricity usage

AND CHOICE OF:

RFID Tracking
4 Automatic Read Zones
1000 Assets
Handheld Tracking

OR

BLE High Value Tracking
4 Automatic Read Zones
100 Assets

The UK Government is giving manufacturing SMEs a boost to their “productivity and competitiveness through the Made Smarter Innovation.
